Subject: Air Weekly

M & D - Here is the weekly from Air for the RA's report.

Uinta-Basin (Utah) Wintertime Ozone: The Uinta Basin ozone episode continued through February 7th with ozone National Ambient Air Quality Standards (NAAQS) exceedances occurring every day since January 29th (ozone concentrations dropped to 53 parts per billion (ppb) on February 8th). Ozone reached *Very Unhealthy Air Quality Index* levels with the 8-hour average above 105 ppb at the Ouray monitor on February 1, 3 and 5, 2017. Ozone was in the *Unhealthy* (86-104 ppb) and *Unhealthy for Sensitive Groups* (71 to 85 ppb) levels in the communities of Myton and Roosevelt during the ozone episode. The Region will be meeting with OAQPS on February 14th to discuss how to proceed with the Uintah & Ouray FIP for existing sources that OMB returned on January 23rd. The Region heard on February 3rd, through the Ute Indian Tribe's counsel, that the Tribe intends to move forward with establishing a working group of representatives from the Tribe, industry partners and the EPA. The working group will develop proposals to address a streamlined nonattainment area permitting process for minor new/modified sources on Indian lands in the Uintah and Ouray

Reservation. The Region is interested in participating in such a working group, if/when invited by the Tribe.
